

* The material is great, *

Better organized ~~note~~ materials could be helpful.

* Review electronic version can be helpful.

(~~Not~~ ~~downloadable~~)

* Great knowledge and experience of the instructor.

* Casual training ~~material~~ environment is great.

The class was very good.

It was good to validate/question some of the practices we are doing with scrum.

I wish I had known that ScrumMaster training would be better to take first; I think for me it did not matter so much, but if you were new to the process it would be a lot of concepts.

It might be better to have a separate course like Intro to Scrum/PO Training and Intro to Scrum/ScrumMaster Training, and make the class 3 days.

The tool's discussion was good; it might be good to work some slides into the material on this.

Feedback from Certified Scrum Product Owner training

I think the visualization (big post-it docs) were a wonderful way to help connect the thoughts. Additionally, all the bright colors ^{helped to} ~~kept~~ my attention.

I enjoyed the hand-on tasks. I would have enjoyed more of them, as I personally learn best by doing something.

While I enjoyed the intimacy of the class I think having more people in the class would have brought on more discussions/different experiences. I would have almost preferred to postpone until the class was slightly larger (but no more than 10).

CPO Class 2-26/27/09

The class was "very good." ~~It was~~ ^{Being} ~~being~~ new to Scrum. I didn't have any idea what material would be covered. I am excited to begin applying the concepts I learned this week.

The class was well organized and the small class size led to some very valuable discussions. If you can maintain smaller class sizes in the future, I think your students would get more out of the class.

Your passion for this framework is very evident in your delivery and fostered a very comfortable learning environment.

I ~~was~~ enjoyed the class a lot.
